

Damask-Modern Fragrance

This fragrance is inherited from the Damask-Classic and is characterized by a strong, passionate but refined fragrance. It is believed that the quality of the fragrance differs from the Damask-Classic as its balance of ingredients is dissimilar to the Damask-Classic. Compare and enjoy the various fragrances.

Papa Meiland

Damask Fragrance and Tea Fragrance

Unlike other flowers, the rose fragrance is not a single fragrance. For roses, there are more than 540 aromatic components that may be present in a variety of complex combinations. Modern roses were developed over time through artificial breeding using original or hybrid species from Europe and the Orient to create roses with a variety of colours, bloom forms, and bush types. It is widely known that repeat-flowering was a characteristic borrowed from Oriental roses as European roses were all traditionally once-blooming. Similarly, the tea-fragrance of Oriental roses has been mixed with the damask fragrance of European roses typically used in perfumes, to create a diverse range of fragrances. These fragrances can be divided into seven distinct fragrance types.

Myrrh (Anise) Fragrance

Myrrh (Anise) fragrance has an herby anise-like scent which incorporates the sweetness of anise along with a stronger grassy green scent. It blends well with tea fragrance and is a common feature of English roses.

Ambridge Rose

Spicy Fragrance

This fragrance is based on the Damask-Classic. However, it is characterized by slightly strong, spicy fragrances such as clove.

Dainty Bess

The Echigo Hillside Park Rose Garden

The garden was opened on May 24, 2003. This rose garden was transferred from the Hokuriku Seisakusho Company (located in Shimogajo, Nagaoka City) after having closed its original rose garden in June 2001. Nagaoka City Office received many requests from those who hoped for the continuation of the roses and the City Office worked for the creation of the garden in Echigo Hillside Park. You can relax and enjoy the rich fragrance of the roses. In the spring of 2023, 20 years after its birth, it was renamed "Nagaoka Fragrant Rose Garden".

The International Fragrant Rose Trials

Through the process of hybridization the rose fragrance had started to disappear, so we began the International Fragrant Rose Trials in 2005 to encourage appreciation of the beauty of fragrant roses, and to further develop the fragrant rose garden at Echigo Hillside Park. Outstanding award-winning roses continue to be grown in the park. We predict that someday soon a world-famous fragrant rose will be discovered at Echigo Hillside Park.

Fragrant hill, double winner of the Ministry of Land, Infrastructure, Transport and Tourism Award in the 1st International Fragrant Rose Trials

Fragrant Rose Festivals

We adjust the pruning schedule of the repeat-flowering roses to enable us to hold two Fragrant Rose Festivals a year which coincide with the spring and autumn flowering seasons. The festivals include a variety of fun events including craft activities and interesting seminars.

Blooming season

Spring	End of May	Late June
Autumn	Beginning of October	Beginning of November

※Flowering time varies by season. Flowering information is provided on our homepage or by telephone.

ECHIGO HILLSIDE PARK JAPAN

Hojun

Damask-Classic Fragrance

A rose fragrance that is well known must be this classical fragrance. It has a strong, bright and full-bodied fragrance and lifts the heart. There are unexpectedly only a few model varieties of modern roses, and the Tea and fruity fragrances tend to slightly stand out.

The Fragrant Rose Garden at Echigo Hillside Park is setting the "standard" with seven distinct fragrance zones

Based on a chemical analysis of the aromatic components, together with a sensory evaluation performed by smelling the scent, rose fragrances can largely be divided into seven different fragrance types. Each area or corner in our Fragrant Rose Garden is therefore arranged according to these fragrance types. By grouping together varieties that typify each of the seven fragrance types, our visitors are able to smell and appreciate each fragrance while gaining an understanding of what the "standard" is for each fragrance type. You can find examples of varieties that are typical of each of the seven fragrances in this guidebook.

Lady Hillingdon

Tea Fragrance

This fragrance contains a special ingredient that is completely different from the fragrance of Damasks. It is only moderately fragrant but is refined and elegant. It is the most common variety of modern rose and although there are some individual difference, Hybrid Tea Roses include an ingredient of this fragrance type.

Fruity Fragrance

This fragrance contains many Damasks and Damask-strains and exhibits the characteristic of balancing the Tea ingredients which coexist in the fragrance. The fragrance creates the image of fresh fruits such as peach, apricot and apple.

Double Delight

Blue Moon

Blue Fragrance

Most blue roses which have blue coloured petals have this type of fragrance. This fragrance consists mainly of the Damask-Modern and Tea ingredients and forms a unique fragrance.

800 varieties 2,400 rose bushes

The scent of each rose makes the entire rose garden fragrant

Nagaoka Fragrant Rose Garden

The Nagaoka Fragrant Rose Garden is a garden that focuses not only on the beauty of gorgeous colors and shapes, but also on the intoxicating fragrance of roses. It consists of 8 areas: "Fragrance Area," "Colour Area," and "Rose Hall of Fame Area" with mainly modern roses; "Area for Wild Roses in Japan" featuring native Japanese roses; "Area for Species and Old Roses," where ancient roses can be systematically viewed; "Rose and Flower Area" featuring classically styled modern roses; and "The International Fragrant Rose Trial Ground" and the "Award-Winning Rose Area," which houses a collection of award-winning roses from the trials. Please take your time and enjoy the many different charms of roses.

How to smell a rose

- Hold the rose by the stem to smell it. The smell of your hand will transfer to the rose if you touch it, so please try not to touch the petals.
- Don't sniff the rose, instead gently inhale the scent.
- Exhale away from the rose. If you breathe on to the rose, the odour of your breath will linger.
- Inhale the scent up to three times and then describe the fragrance. If you smell the rose more than that, your nose will become accustomed to the scent and you won't be able to discern the fragrance.

Award-Winning Rose Area

All gold, silver, and bronze award-winning varieties, including the special award-winning varieties that won the International Fragrant Rose Trials, are planted here, allowing visitors to see the best roses from around the world while reviewing the history of the trials.

Colour Area

This area is located just beyond the bus stop giving you your first sight of the park. White coloured roses which have names associated with snow and white representing the key word "Snow" of the Echigo Region can be seen here. The gradation of orange, yellow, red and pink colours can be enjoyed in each area.

Area for Wild Roses in Japan

The number of the variety of wild roses changes depending on the interpretation of the term [wild], but Japan is said to have more than 14 varieties among 100 to 200 varieties that exist around the world. This means that one tenth of the world's wild rose varieties are native to Japan. Wild roses unique to Japan are grown in this area.

Fragrance Area

With the philosophy that the 'Beauty of the rose lies in its fragrance' as our theme, we selected modern repeat-flowering rose varieties with a full-bodied fragrance, and planted them in 6 groups according to their fragrance type.

Area for Species and Old Roses

Old roses before the creation of the modern roses are planted by groups. In the spring, you can see a display of old roses grown over the poplar trees.

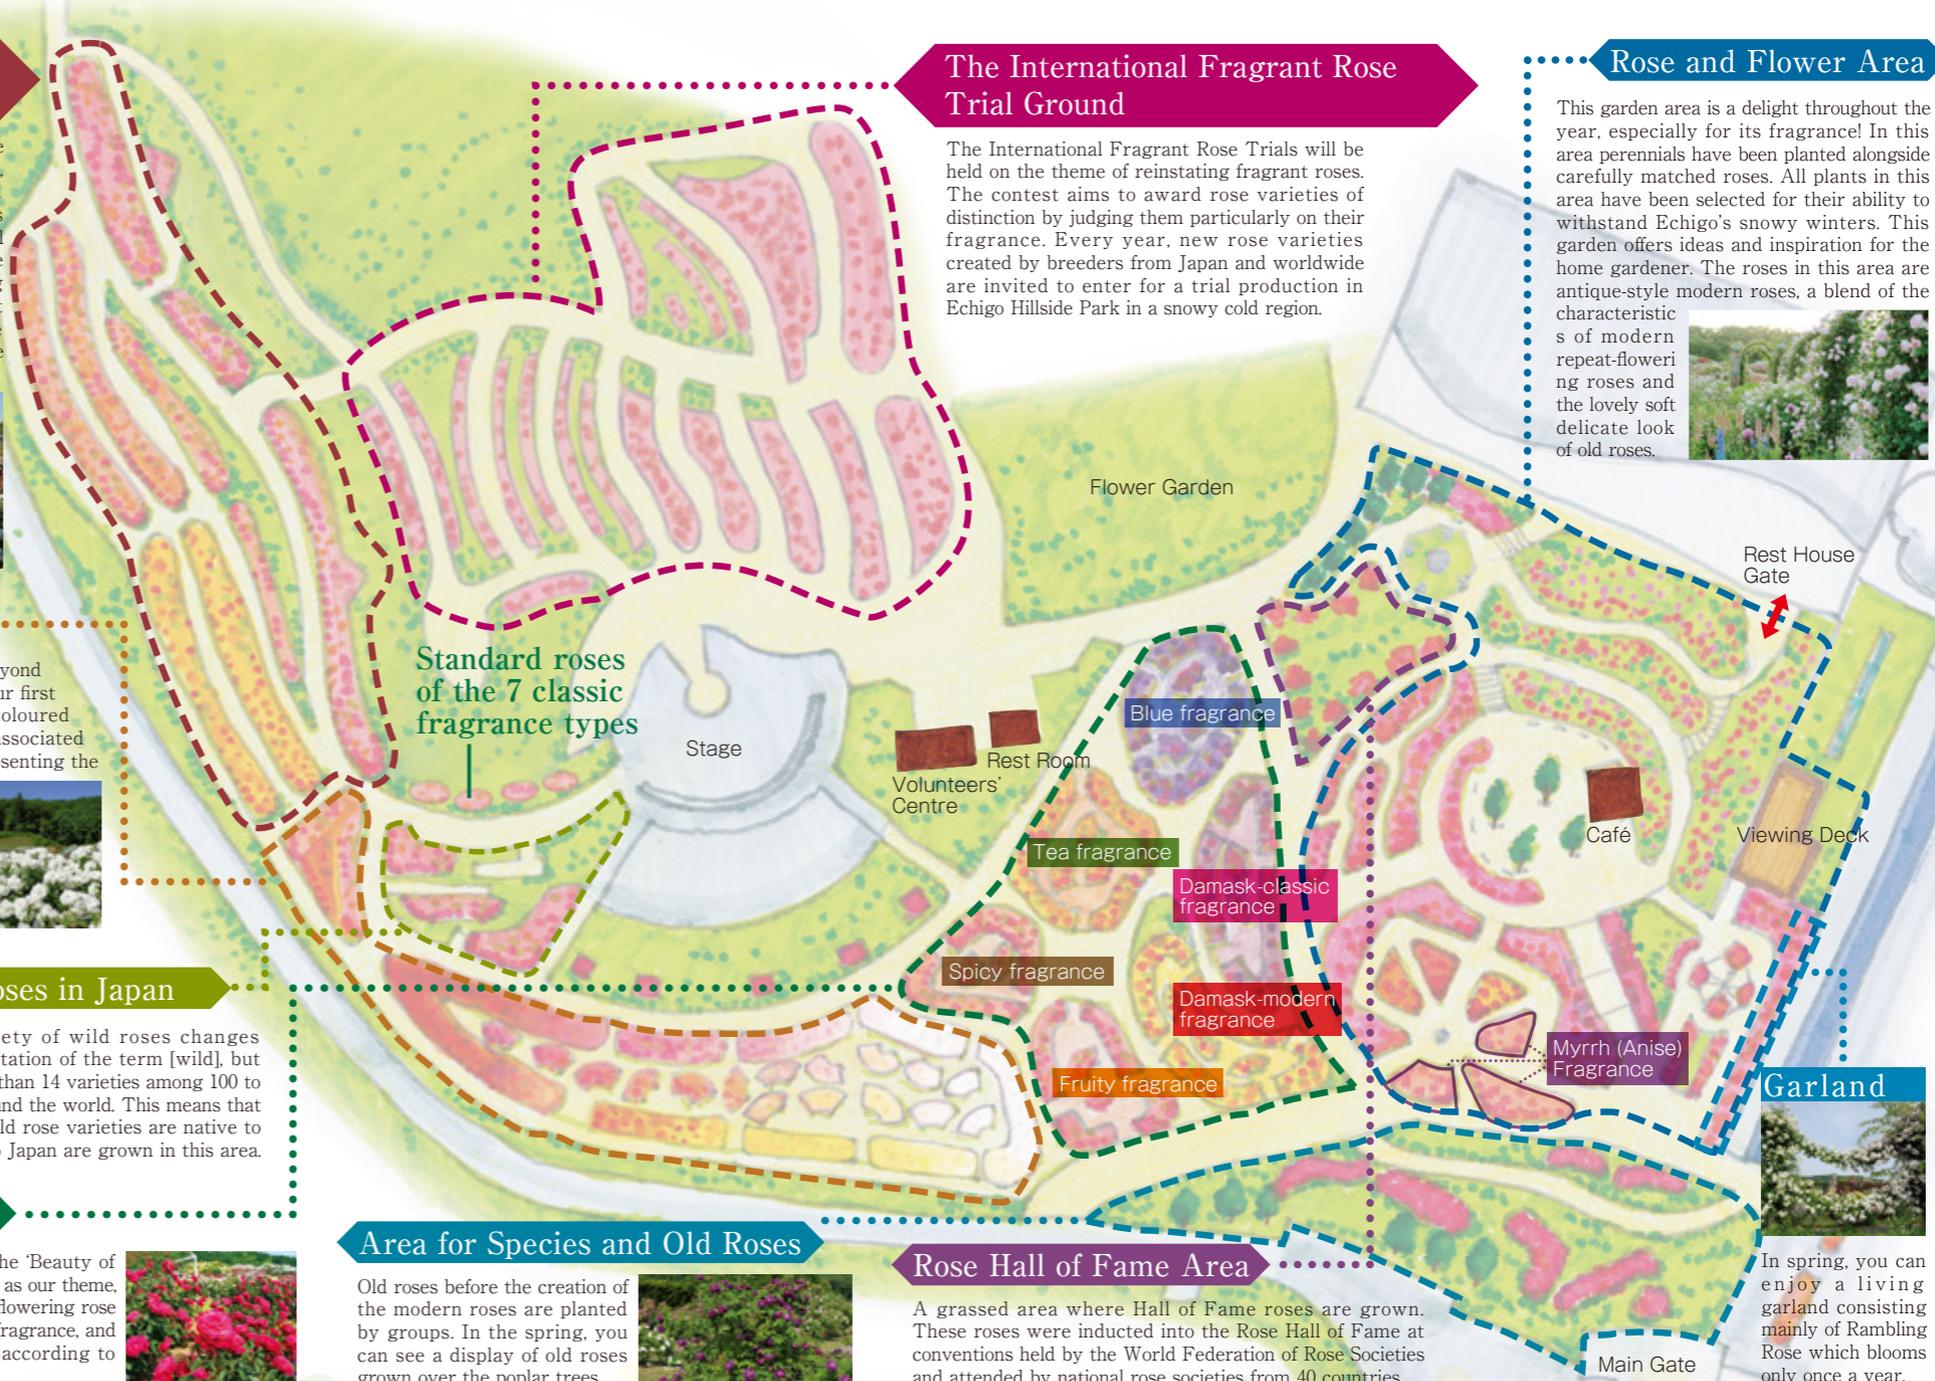

The International Fragrant Rose Trial Ground

The International Fragrant Rose Trials will be held on the theme of reinstating fragrant roses. The contest aims to award rose varieties of distinction by judging them particularly on their fragrance. Every year, new rose varieties created by breeders from Japan and worldwide are invited to enter for a trial production in Echigo Hillside Park in a snowy cold region.

Rose and Flower Area

This garden area is a delight throughout the year, especially for its fragrance! In this area perennials have been planted alongside carefully matched roses. All plants in this area have been selected for their ability to withstand Echigo's snowy winters. This garden offers ideas and inspiration for the home gardener. The roses in this area are antique-style modern roses, a blend of the characteristics of modern repeat-flowering roses and the lovely soft delicate look of old roses.

In spring, you can enjoy a living garland consisting mainly of Rambling Rose which blooms only once a year.
